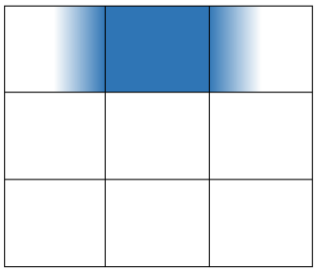
Q3 2026 Strategy Factsheet

Investment Objective

- Capital Appreciation
- Lower Risk Attributes
- Lower Tracking Error

U.S. Equity Style: Large Core



IVS US Large strategy provides broad U.S. large-cap core exposure seeking outperformance with lower-risk characteristics and downside protection. The strategy is designed to help investors remain invested through market cycles and support steady long-term wealth accumulation.

IVS systematically excludes speculative, overvalued companies and poor capital stewards with unfavorable risk-return characteristics. By removing inferior companies, the strategy maintains more stable returns to create sustainable economic wealth over time.

Intrinsic Value Stewardship® (IVS) U.S. Large

Q3 2026 Strategy Factsheet

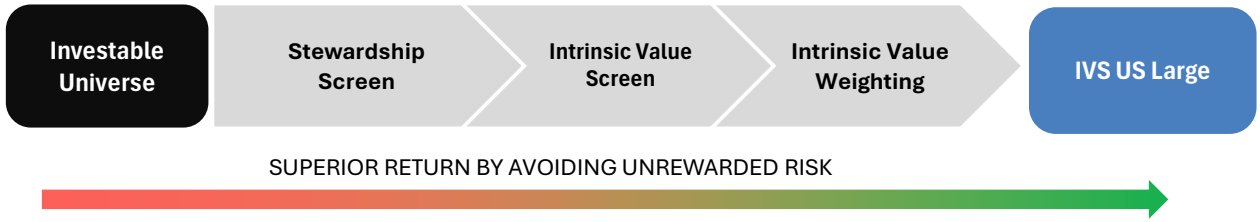
Intrinsic Value Stewardship® (IVS) De-Selection Process

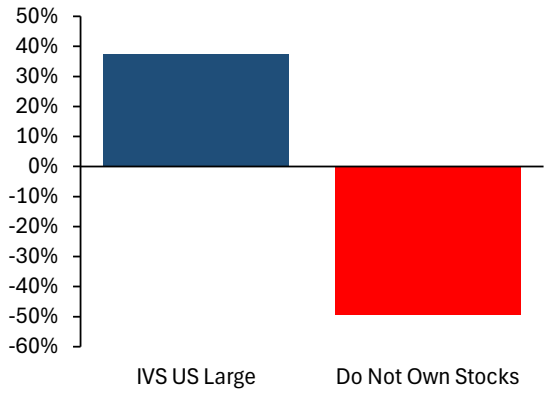


IVS combines Intrinsic Value and Stewardship to systematically remove speculative, overvalued companies and poor stewards of capital that destroy wealth. Historically, these "junk" companies have experienced deeper drawdowns and weaker long-term performance. The result is a portfolio of companies that create sustainable economic wealth.

By removing overvalued companies and poor stewards of capital, the strategy focuses on a higher quality investment universe. The remaining holdings are weighted by intrinsic value rather than market capitalization to support broad market participation and superior long-term compounding of wealth across full market cycles.

Strategy Characteristic vs the Russell 1000

Intrinsic Value Gap®
Relative to Russell 1000



IVS is positioned to capture greater upside relative to the benchmark.

A company's Intrinsic Value Gap® measures the difference between its market price and intrinsic value, indicating the degree of potential upside or downside at a given point in time.

The IVS framework systematically removes stocks with limited intrinsic value upside, creating a portfolio positioned for more attractive long-term wealth accumulation.

The chart displays the Intrinsic Value Gap® of the IVS Strategy and Do Not Own Stocks, each measured relative to the Russell 1000.

IVS Investment Strategies for Intelligent Global Diversification

	SMID	IVS US SMID	IVS Intl SMID

As a foundational building block within the IVS Global Allocation framework, IVS US Large is part of a unified family of investment strategies designed to deliver consistent, risk-aware exposure across global markets. The shared investment philosophy supports globally diversified, tax-efficient allocations built for long-term, after-tax wealth compounding.

Scientific Research:

The IVS framework is grounded in academic and practitioner research demonstrating that intrinsic value, economic profitability, and disciplined capital allocation are key drivers of long-term wealth creation.

Scientific Research (Cont.):

The IVS framework is grounded in academic and practitioner research demonstrating that intrinsic value, economic profitability, and disciplined capital allocation are key drivers of long-term wealth creation.

This research shows that intrinsic value provides a more effective framework than traditional price-based measures for identifying long-term return potential across market environments, helps explain the declining performance of conventional value strategies, and documents that prices tend to converge toward intrinsic value over time. It also shows that companies with positive Economic Margins that reinvest prudently are more likely to create shareholder wealth, reinforcing the principles that underpin the IVS framework.
